

What happens if I stop my Shipment before time

Under the right conditions, even after stopping a SHIP L/SHIP M and SHIP S, the device continues to monitor data for a total of 7 days. For this to be successful the following requirements must be met.

Requirements:

1. External sensor (if in use) has no Sensor ERROR and is not disconnected
2. Battery has enough charge
3. Device is not "Restarted", "Wiped" or "Deleted"

Device continues to collect data for 24h to the cloud:

After 24h the Logger (SHIP L, SHIP M) can either be Sync or must be connected to SmartView and the data must be Uploaded manually (SHIP S must be Uploaded manually) (up to further 6 days of data could be saved).

After Sync or manually Uploading the data, you will see the data in the graph.

NOTE: GPS Data will only be pinged every 24h once the device has been stopped.
